A.I.M. Advanced Illuminated Marking System

Advanced Illuminated Marking System

Aim is the next evolution in route, area and object marking, it can show a direction, or clearly mark an area of danger.

The AIM tablets are self activating when using dispenser but can also be activated manually. The AIM tablets can be turned on and off and are re-usable until the battery is depleted.

The dispenser can be easily removed from its holder and activated with one gloved hand. The replacement of the illumination devices is easy just slide the side cover down and insert up to 20 tablets. Push the cover back into place and you are ready to use your dispenser.

The AIM product can indicate a direction to follow, offer safe guidance through an area of danger, or mark an area of danger. The AIM tablets come in a variety of colours plus Infra-Red, they give a clear and consistent reference point and are highly visible at night, in both overt and covert modes of operation.

The tablets are clearly seen with the naked eye at 250 Meters. Illumination times per tablet, 36 hours before the light is fully

The new tactical dispenser will hold up to 20 AIM tablets, to activate the tablets simply push the slider forward the tablet will illuminate and eject from the front of the dispenser.
