A1 Echelon Rolling Replenishment  
 RMP Close Support Route Marking  
 Marking NBCD Contaminated Areas

For further information on the Battery NVG Fireworm please see the Product Page and Technical pdf download sheets available.

For current users please contact LGI directly.

## NVG Fireworm

**British soldiers in theatre have said: "...the confidence in knowing where we can walk safely and without fear of danger is essential."**

The NVG Fireworm illuminated flexible marking system has been designed and developed by LGI specifically to overcome the problem of highlighting areas of danger or marking a safe route, either overtly or covertly.

The illumination colour is highly visible at night and provides the safety and comfort factors, inherent in a clear constant reference point. The user can set the visual range in either overt or covert mode.

The illumination does not have an adverse effect when using night vision goggles.

There are several optional extra capabilities that can be applied to this product, these include:

- Remote Activation
- Constant / Flashing Modes
- Solar Recharge
- Backpack Carry Case
- AC/DC Charging

### Illumination times at:

50m	Overt mode: 30 hours -	Covert mode :110 hours
100m	Overt mode: 15 hours -	Covert mode: 60 hours
300m	Overt mode: 8 hours -	Covert mode: 30 hours

The illumination material can be easily repaired if damaged and can be returned to operational use with a few minutes. The Fireworm has been fully tested by the MoD and release to service documents have been issued as well as NATO Stock Numbers.

### NCAGE: KD2H7

50m Fireworm:	NSN: 6230-99-585-8647
100m Fireworm	NSN: 6230-99-316-0177
300m Fireworm	NSN: 6230-99-216-9544
